

PulseFutures

Smart Trading Assistant for Disciplined Futures Traders

Market analysis tools only. Not financial advice. Trading involves risk.

1 What Is My Trading Story?

PulseFutures was not created to sell signals. It was created to **fix my own trading mistakes**.

Like many traders, I struggled with:

- Too many signals
- Overtrading during the wrong sessions
- Ignoring risk rules after a few losses
- Emotional decisions
- No clear journal or feedback loop

The market wasn't the problem. **Lack of structure was**. I wanted:

- Fewer but higher-quality setups
- Clear Entry, Stop Loss, and Targets
- Enforced risk limits
- A system that tells me **when not to trade**
- One place to scan the whole market quickly

PulseFutures is the system I built to trade **with discipline first, profits second**.

2 What Is PulseFutures?

PulseFutures is a smart trading assistant built on Telegram.

It works simultaneously as:

🤖 A Trading Robot

- Continuously scans futures markets
- Filters out low-quality setups
- Applies confidence scoring & session logic
- Rejects most trades automatically
- Prioritizes structure over frequency

📱 An Interactive Telegram System

- Real-time market dashboard (/screen)
- Trade setups
- Risk tools
- Built-in journal
- Performance reports
- No external apps required

✉️ A Controlled Email Alert Engine (Pro Only)

- Sends only priority setups
- Fully session-aware
- Pauses automatically when limits are hit
- Designed for traders who cannot watch Telegram all day

PulseFutures **does not auto-trade** and **does not give financial advice**.

It supports disciplined decision-making.

3 What Are the Main Functions?

PulseFutures is a complete trading workflow system.

◆ A. Smart Signals (Telegram + Email for Pro)

When a **setup** qualifies through strict filtering logic, PulseFutures generates:

- Direction (LONG / SHORT)
- Entry price
- Stop Loss
- Take Profit targets (3 recommended)
- Risk / Reward ratio
- Confidence score
- TradingView chart link
- Engine type
- Futures volume context

Signals appear:

- In **Telegram** (Standard & Pro)
- By **Email (Pro Only)**

If signals are rare, the system is protecting you.

◆ B. Real-Time Dashboard (/screen)

The /screen command gives a structured overview of:

- Top Trade Setups
- Setups waiting for confirmation
- Trend continuation watch
- Directional leaders
- Directional losers
- High-volume futures markets

Each item includes:

- Direction
- Confidence score
- Entry / SL / TP
- Risk–Reward
- Futures volume
- Session context

Instead of checking dozens of charts, you see **what matters now**, instantly.

◆ C. Big Move Alerts (Pro Only)

Monitors abnormal volatility:

Default thresholds:

- 1H \geq 10%
- 4H \geq 15%

Applies to both:

- Positive spikes
- Negative drops

Fully customizable.

◆ D. Built-In Trade Journal

You can:

- Log trades
- Update Stop Loss
- Move to Risk-Free
- Close with PnL
- Track performance
- Review discipline metrics

No spreadsheets required.

◆ E. Advanced Risk & Governance

You can:

- Set equity
- Choose risk mode (USD or %)
- Set daily risk cap
- Set max trades per day
- Control sessions
- Control email caps (Pro)
- Enable unlimited sessions (Pro)
- Set email gap (Pro)
- Generate advanced reports (Pro)

PulseFutures protects you on bad days more than it excites you on good ones.

Command List (Robot Help Manual)

Below is a **complete command reference**, categorized and explained.

A. Core Commands

Command	What It Does
/start	Starts the bot & onboarding
/help	Shows help & command list
/status	Account & system status
/health	Bot & data health check
/support	Contact support

B. Market & Signals

Command	What It Does
/screen	Full real-time market dashboard
/signal	Latest qualified setup
/signals_daily	Daily signal summary
/signals_weekly	Weekly signal summary

C. Risk & Position Sizing

Command	What It Does	Example
/equity	Set account equity	/equity 5000
/riskmode	Choose USD or % risk	/riskmode pct 2
/dailycap	Set daily risk cap	/dailycap pct 5
/size	Calculate position size	/size BTC long sl 42000

D. Trade Journal

Command	What It Does	Example
/trade_open	Log a new trade	/trade_open BTC long entry 43000 sl 42000
/trade_sl	Update Stop Loss	/trade_sl 12 42500
/trade_rf	Move trade to risk-free	/trade_rf 12
/trade_close	Close trade with PnL	/trade_close 12 pnl +80

E. Sessions, Limits & Alerts

Command	What It Does	Example
/sessions	View active sessions	/sessions
/sessions_on	Enable session	/sessions_on NY
/sessions_off	Disable session	/sessions_off ASIA
/sessions_unlimited_on	Remove session restriction (Pro)	/sessions_unlimited_on
/sessions_unlimited_off	Re-enable session restriction	/sessions_unlimited_off
/trade_window	Set allowed trading time window	/trade_window 09:00 17:00
/limits	View trading limits	/limits

F. Email & Alerts (Pro Only)

Command	What It Does	Example
/email	Set your email address	/email you@example.com
/email_test	Test email delivery	/email_test
/email_on	Enable email alerts	/email_on
/email_off	Disable email alerts	/email_off
/limits_emailcap	Set number of emails per session	/limits_emailcap 5
/limits_emailgap	Set min gap between emails	/limits_emailgap 45
/limits_emaildaycap	Set max number of emails per day	/limits_emaildaycap 10

G. Reports

Command	What It Does	Example
/report_daily	Daily performance report	/report_daily
/report_weekly	Weekly performance report	/report_weekly
/report_overall	All-time performance report	/report_overall

5 Membership Plans

7-Day Trial

- Full Pro access for 7 days
- Access to /screen and email alerts
- After 7 days, access is automatically disabled
- You must upgrade to continue using Standard or Pro features

★ Standard – \$49 / month

Best for disciplined Telegram traders.

Includes:

- Telegram trade signals
- /screen dashboard
- Entry / SL / TP levels
- Confidence score
- Position sizing calculator
- Basic trade journal
- Session control
- Default limits (5 trades/day, 5 signals/session)

No email alerts / No unlimited sessions / No big move alerts / No advanced reports

🚀 Pro – \$99 / month

Designed for serious traders. Includes everything in Standard, plus:

- Priority Email Alerts
- Big Move Alerts
- Custom email caps
- Custom email gap control
- Unlimited session mode
- Advanced governance system
- Advanced performance reports
- Health & monitoring tools

Pro is built for structured execution and discipline automation.

Feature	Standard	Pro	7-Day Trial
Telegram Signals	✓	✓	✓
/screen	✓	✓	✓
Position sizing	✓	✓	✓
Trade journal	✓	✓	✓
Big Move Alerts	✗	✓	✓
Email Alerts	✗	✓	✓
Email Cap Control	✗	✓	✓
Email Gap Control	✗	✓	✓
Unlimited Sessions	✗	✓	✓
Advanced Reports	✗	✓	✓
Health Monitoring	✗	✓	✓

6 How To Start

Step 1

Press /start and review the introduction.

Step 2

Set Your Core Parameters:

- /equity – Set account size
- /riskmode – Choose USD or %
- /sessions – Enable your trading sessions
- /tz – set your local timezone

Pro users:

- /email – set your email: your@mail.com
- /email_test – test receiving email test
- Optional: /sessions_unlimited_on

Recommended setup:

- Session Priority: 1- New York, 2- London and 3- Asia
- 5 trades per day
- 5 emails per session
- 30-minute email gap

These are optimized for discipline.

Step 3 How To Use The System Properly

There are two ways to use PulseFutures:

Option A — Manual Scan (Standard & Pro)

Use /screen to see:

- Best trade setups
- Market structure
- Trend continuation candidates

This is ideal when you are actively monitoring markets.

Option B — Recommended Method (Pro Only)

The recommended approach is: Wait for email alerts.

Email alerts:

- Are filtered more strictly
- Respect session governance
- Respect risk caps
- Respect email caps
- Reduce overtrading
- Reduce emotional entries

Instead of hunting trades, you react only when high-quality setups qualify.

Use /screen only when:

- You want deeper context
- You want to confirm structure
- You are about to open a trade

The system is designed to: Trade less. Trade better.

Step 4 Opening & Managing Trades

1. Use /size to calculate position size
2. Use /trade_open to log an opened trade
3. Use /trade_rf when you do risk-free a position
4. Use /trade_sl to adjust stop loss
5. Use /trade_close to log a closed trade

Use 3 Take Profit (TP) levels when possible.

Step 5 Review Performance

- /report_daily
- /report_weekly
- /report_overall (Pro)

Track discipline, not just profit.

6 Summary

PulseFutures is not built to make you trade more.

It is built to help you:

- Trade **less**
- Trade **better**
- Stay **disciplined**
- Survive long enough to improve

If PulseFutures is quiet, **that is the system doing its job.**
